

OMEGA[®] Tracer[®] Systems

AK Measuring Device

This handy device helps practitioners to determine length measurements on all transfemoral patients more accurately. The AK Measuring Device features two flared ends to verify that placement is directly on the ischium. The adjustable platform remains fixed at the limb's distal end, once the practitioner locks the button in place.

This innovative tool is included in all OMEGA Tracer packages and can also be purchased separately.

Product No.	Description
